COMMERCIAL FEEDING STUFFS

REPORT ON INSPECTION

1944

E. M. BAILEY¹

THE FEED LAW

The statute relating to concentrated commercial feeding stuffs imposes upon the Station (1) all duties incidental to the annual registration of feeds offered for sale in the State; (2) the collection of samples for inspection and analysis; (3) the examination of all samples so collected; (4) the preparation and publication of a bulletin summarizing the results of inspection and giving other pertinent information; and (5) joint responsibility with the Dairy and Food Commissioner for rules and regulations for carrying out the provisions of the law.

The enforcement provisions of the statute are delegated to the Dairy and Food Commissioner.

The following regulations were issued by the Director of this Station and the Dairy and Food Commissioner in October, 1944, superseding those issued in Bulletin of Immediate Information No. 60, dated June, 1927, and in Circular 135, dated May, 1939.

REGULATIONS

REGULATION 1. FEEDS NOT CLASSED AS CONCENTRATED COMMERCIAL FEEDING STUFFS

(SEC. 4717)

It is held that the law exempts from classification as concentrated commercial feeding stuffs, and therefore from registration: (1) roughages such as hays, straws, corn stover and ensilage; (2) whole grains and mixtures thereof; (3) meals made from whole grains when not mixed with other materials or with each other; (4) feed ground from whole grain and sold by the manufacturer directly to the consumer; and (5) feed mixed according to a formula furnished by the consumer, for his own use.

Under clause (2), above, registration will not be required for mixtures in which the ingredients, excepting corn, are whole grains. Corn, if present, may be whole or cracked.

¹ Analyses are by Messrs. O. L. Nolan, D. C. Walden and Richard Merwin and Miss Helen Kocaba; biological assays under direction of Dr. R. B. Hubbell; microscopic examinations by Miss Janetha Shepard; and sampling by Mr. George Smith. Compilations are largely by Mrs. M. B. Vosburgh.

Clause (4) refers to feed ground from materials furnished by the consumer.

Under clause (5) feed is regarded as "mixed to order" and must be so tagged together with the name of the customer for whom it is mixed, or otherwise identified to distinguish it from regular brands offered for general sale. Such feed must be sold only to the customer for whom it was mixed; if sold to others it becomes a regular brand and subject to registration and other provisions pertaining to feeds in general.

REGULATION 2. METHOD OF LABELLING

(SEC. 4718)

All concentrated commercial feeding stuffs, other than vitamin D carriers, must be labelled either by a statement printed on the bag or upon a properly attached tag; in the case of concentrated feeding stuff sold in bulk, a certificate which shall contain the information otherwise required to appear upon the bag or upon the tag, may be issued by the dealer in lieu thereof.

The use of wire or any metal in affixing tags is prohibited by law.

The law requires a statement of (1) the net weight of the feed contained in the package; (2) the name, brand or trademark, under which the feed is sold; (3) name and address of the manufacturer or importer; (4) the minimum percentages of (a) crude protein and (b) crude fat, and the maximum percentage of (c) crude fiber contained in the feed; (5) the separate ingredients of which the feed is composed.

While the law requires only a statement of the items enumerated above no objection will be raised to more complete statements of chemical composition or formula.

REGULATION 3. CONCERNING VITAMIN D CARRIERS

Vitamin D carriers are required to be registered in the same manner and under the same conditions as obtain for feeds in general.

Information to be given on labels and in applications for registrations is (1) name of product; (2) vitamin D potency in terms of A. O. A. C. chick units per gram; (3) name and address of manufacturer, distributor or other person responsible for the product; and, (4) on the label, a statement of net weight or volume.

The A. O. A. C. chick unit is the vitamin D activity produced by one U. S. Pharmacopoeia unit of vitamin D from the U. S. P. "Reference Cod Liver Oil", determined by the method of assay adopted by the Association of Official Agricultural Chemists.

REGULATION 4. CONCERNING COTTONSEED MEAL, ETC.

Cottonseed meal, linseed meal, soybean meal, and other vegetable feeds that are sold as fertilizer, are required to be registered under

the provisions of the fertilizer law in addition to registration as feeds. If sold exclusively for one or the other of these purposes, the articles may be registered only under the law which applies.

For such of these articles as are used for fertilizer purposes chiefly or entirely as sources of nitrogen, only nitrogen (or protein) need be declared in the application for registration as fertilizer; and the tags or labels generally attached to such articles when intended for feeding purposes will be acceptable for them when sold as fertilizer.

REGULATION 5. DUTIES OF MANUFACTURERS, JOBBERS AND
DEALERS WITH REFERENCE TO REGISTRATION

(SEC. 4719)

All concentrated commercial feeding stuffs, including vitamin D carriers, must be registered with the Connecticut Agricultural Experiment Station annually on January 1, or before they are offered for sale. Registration blank forms are supplied by the Station.

Manufacturers, jobbers or individuals shipping feeds into Connecticut will be expected to register their brands and pay the necessary fees thereon. **Connecticut dealers should assure themselves that the brands they handle are properly registered and labelled. In case the manufacturer or jobber outside the State neglects or refuses to register, the dealer who handles such feeds will be held responsible for such registrations, registration fees and other legal requirements.**

Dealers within the State who mix their own brands are responsible for the registration and proper labelling thereof.

REGULATION 6. DEFINITIONS OF TERMS USED IN THE LAW,
AND OF OTHER TERMS

Person. The term "person" is accepted as defined in General Statutes, Section 2432; it imports the singular or the plural as the case demands; and includes corporations, companies, societies and associations.

Importer. The term "importer" is defined in the act.

Brand. It is held that a distinct brand name, or a distinct analysis, constitutes a distinct brand.

Definitions for Feeding Stuff. The definitions and standards for feeding stuffs adopted from time to time by the Association of Feed Control Officials of the United States are accepted as official in carrying out the provisions of this law; and the rules and regulations as adopted by that association are accepted as far as possible and when not inconsistent with the Connecticut Statutes.

REGULATION 7. METHODS OF ANALYSIS

(SEC. 4718)

The methods of analysis employed shall be those prescribed by the Association of Official Agricultural Chemists, wherever such methods have been adopted for the determinations desired.

REGULATION 8. CONCERNING MEDICATED FEEDS AND MINERAL MIXTURES

The law does not include medicated products used as "conditioners" for stock and poultry, and which consist essentially of substances possessing or claimed to possess, medicinal or condimental properties; nor does it include products consisting of supplemental minerals.

REGULATION 9. FEEDS IN DIFFERENT PHYSICAL FORMS

The same feed offered in different physical forms, e. g., mash and pellets, requires but one registration.

REGULATION 10. REVISIONS AND SUBSTITUTIONS OF REGISTRATIONS

A feed registration after being filed may be revised without payment of an extra registration fee.

A brand of feed duly registered and subsequently discontinued may be replaced by another brand for the unexpired period of registration without payment of an extra registration fee.

REGISTRATIONS

For the period January 1, 1944, to December 31, 1944, 168 firms registered 1,035 brands of feeding stuffs, and 12 firms registered 23 brands of vitamin D carriers.

As required by statute the registrations are listed as follows:

INSPECTION

In the calendar year 1944 a total of 1,271 samples were examined. This number includes official samples of commercial feeds and vitamin D carriers, and miscellaneous materials as shown in the following summary:

| | |
|--|-------|
| Biological specimens examined for poisons | 109 |
| Check feeds, A. F. C. O. | 4 |
| Commercial feeding stuffs, official samples | 796 |
| Miscellaneous feeds, etc., analyzed for purchasers | 45 |
| Pasture grass, etc., samples for Storrs Station..... | 224 |
| Vitamin D carriers, official samples | 43 |
| Wild bird feed (native seeds and berries) | 50 |
| Total | 1,271 |

Samples examined for the Storrs Station are in connection with investigations carried on by that Station and are not for discussion in this report.

The results of analyses of official inspection samples, other than vitamin D carriers, are summarized as follows:

| | |
|-------------------------------|-----|
| Total number of samples | 796 |
| Samples deficient in: | |
| one item | 110 |
| two items | 12 |
| three items | 0 |
| | 122 |

| | | |
|--|--------------------|-----|
| Percentage of samples meeting guaranties | 85 | |
| Total guaranties made | 2,382 ¹ | |
| Guaranties not met: | | |
| protein | 29 | |
| fiber | 20 | |
| fat | 85 | 134 |
| Percentage of guaranties met | | 94 |

The above summary indicates that guaranties have been well maintained in spite of wartime difficulties that have confronted the feed industry.

Analyses of official samples are given in Table 1.

VITAMIN D CARRIERS

Forty-three samples of vitamin D carriers were tested during the year. Results of biological tests are summarized in Table 2. Of the total number examined 34 fully met or exceeded the potencies guaranteed; five were sufficiently close to guaranties to be passed; and four were definitely below guaranties.

Two samples of an emulsified preparation (Amber-oil 85 D Emulsion) were old stock that had been held over the winter and the emulsion had broken. They were below standard but, as proper sampling was impossible, the results were not representative of the product and the samples are not included in the above totals.

Tests made in the eight-year period since this work was undertaken are summarized as follows:

| Year | No. of samples tested | Found satisfactory | Passed | Below guaranty |
|--------|-----------------------|--------------------|--------|----------------|
| 1937 | 44 | 27 | 4 | 13 |
| 1938 | 55 | 42 | 5 | 8 |
| 1939 | 45 | 31 | 11 | 3 |
| 1940 | 56 | 20 | 20 | 16 |
| 1941 | 42 | 24 | 12 | 6 |
| 1942 | 48 | 25 | 16 | 7 |
| 1943 | 42 | 31 | 9 | 2 |
| 1944 | 43 | 34 | 5 | 4 |
| Totals | 375 | 234 | 82 | 59 |

For the entire eight-year period, the proportions of samples that were found distinctly below guaranty is 16 per cent. In the last four years only 10 per cent were definitely deficient.

MISCELLANEOUS FEEDS

Forty-five samples of feed and fodder materials have been examined for purchasers and dealers. Often these are submitted on suspicion that they were the cause of sickness or abnormal conditions of

¹ Six samples with only two guaranties.

livestock or poultry. Many times such complaints are accompanied by the information that the trouble began at or about the time a change in feed was made. Laboratory examinations have rarely, if ever, shown such suspicions to be warranted. It is well known that palatability is a factor to be taken into account in animal feeding, and temporarily animals accustomed to one feed may be indifferent to another until they have become accustomed to it. Again, the abnormal symptoms may have been coincident with the change of feed. Such explanations, however, are not likely to be convincing to the owners. Occasionally definite evidence of poison, due to accidental contamination with insecticides or other poisons on the farm premises, is found and in such instances the explanation is clear.

BIOLOGICAL SPECIMENS EXAMINED FOR POISONS

C. E. SHEPARD AND E. M. BAILEY

One hundred and nine biological specimens were examined in connection with suspected poisoning of domestic animals and poultry. In 37 of these, poisonous substances were found in sufficient quantity to suggest probable or possible causes of death.

The poisonous materials and the number of specimens in which they were found are summarized as follows: arsenic (15), arsenic with lead (lead arsenate) (6), Paris green (arsenic) (1), cyanide (5), lead (6), nitrates (2), yellow phosphorous (1), strychnine (1).

In some of these cases, circumstances indicated malicious distribution of poisoned bait, but in most of them accidental poisoning was the probable explanation. In several instances the evidence was that animals had browsed upon foliage along a railroad right-of-way that had been sprayed with arsenical weed killer. Whatever the legal aspects may be as to responsibility, stock owners should be alert to this possibility of animal poisoning; and railroad officials would do well to investigate non-toxic and equally effective weed killers.

Station Bulletin 470 (1943) discusses some common causes of animal poisoning.

WILD BIRD FEED

Native seeds and berries of interest as potential sources of feed for wild bird life have been analyzed for Mr. James S. Bishop, State Department of Fisheries and Game.* Bul. 459, (1941) and Bul. 473 (1942) contain analyses of previous samples.

Analyses of recent samples are given in Table 3.

A. F. C. O. SAMPLES

Four check feed samples have been analyzed in the check feed program sponsored by the Association of American Feed Control Officials.

DETERMINING GUARANTIES

The most reliable way to determine safe guaranties for feed mixtures is by analysis. Larger manufacturers with laboratory facilities follow this method. Small manufacturers and home mixers are without such facilities and they must resort to other means. A close estimate can be made by a simple calculation using as a guide the analysis tags on the ingredients to be mixed.

If, for example, a mixture is to be made with cottonseed meal, corn meal, ground oats, gluten feed and wheat bran as ingredients, we may assume that the tags for these several ingredients show the following percentages of protein, fat and fiber.

| Ingredient | Protein per cent (lbs. per 100) | Fat per cent (lbs. per 100) | Fiber per cent (lbs. per 100) |
|-----------------------|---------------------------------------|-----------------------------------|-------------------------------------|
| Cottonseed meal | 41 | 7 | 11 |
| Corn meal | 24 | 2 | 11 |
| Ground oats | 12 | 5 | 11 |
| Gluten feed | 25 | 2 | 7 |
| Wheat bran | 16 | 5 | 10 |

Remembering that per cent means pounds per 100 pounds, then 100 pounds of each of the materials listed above will contain the number of pounds of the several nutrients shown.

If the formula to be mixed calls for the pounds of ingredients shown in column 1 below, then the pounds of the several nutrients will be as shown in columns 2, 3 and 4. The total weight of the mix is seen to be one ton (20 hundred pounds), so the analysis of the finished product is found by dividing the totals by 20, or by moving the decimal point one place to the left and dividing by 2.

Example

| Column 1 | 2 Protein lbs. | 3 Fat lbs. | 4 Fiber lbs. |
|---------------------------|-------------------|---------------|-----------------|
| Cottonseed meal, 200 lbs. | 82 | 14 | 22 |
| Corn meal, 200 lbs. | 48 | 4 | 22 |
| Ground oats, 600 lbs. | 72 | 30 | 66 |
| Gluten feed, 300 lbs. | 75 | 6 | 21 |
| Wheat bran, 700 lbs. | 112 | 35 | 70 |
| Totals 2,000 lbs. | 389 | 89 | 201 |
| Per cent | 19.45 | 4.45 | 10.05 |

Mixers should remember that for protein and fat the guaranties are minimum values; for fiber the guaranty is the maximum. In other words, the manufacturer guarantees that protein and fat will not be less than the percentages declared and in case of fiber it will not exceed the figure declared.
