COMMERCIAL FEEDING STUFFS

REPORT ON INSPECTION

1953

H. J. FISHER¹

THE FEED LAW

The statute relating to concentrated commercial feeding stuffs (Chapter 320, General Statutes, Revision of 1949) imposes upon the Station (1) all duties incidental to the annual registration of feeds offered for sale in the State; (2) the collection of samples for inspection and analysis; (3) the examination of all samples so collected; (4) the preparation and publication of a bulletin summarizing the results of inspection and giving other pertinent information; and (5) joint responsibility with the Food and Drug Commissioner for rules and regulations carrying out the provisions of the law.

The enforcement provisions of the statute are delegated to the Food and Drug Commissioner.

The following regulations were issued by the Director of this Station and the Food and Drug Commissioner in February, 1949:

REGULATIONS

REGULATION 1. FEEDS NOT CLASSED AS CONCENTRATED

COMMERCIAL FEEDING STUFFS

(Sec. 6740)

It is held that the law exempts from classification as concentrated commercial feeding stuffs, and therefore from registration: (1) roughages such as hays, straws, corn stover and ensilage; (2) whole grains and mixtures thereof; (3) meals made from whole grains when not mixed with other materials or with each other; (4) feed ground from whole grain and sold by the manufacturer directly to the consumer; and (5) feed mixed according to a formula furnished by the consumer, for his own use.

Under clause (2), above, registration will not be required for mixtures in which the ingredients, excepting corn, are whole grains. Corn, if present, may be whole or cracked.

Clause (4) refers to feed ground from materials furnished by the consumer.

¹Analyses are by Mr. O. L. Nolan, Miss Helen Kocaba, Mrs. Janice Lewis and Mrs. Gillian Rose; biological assays under direction of Dr. R. B. Hubbell; microscopic examinations by Miss Janetha Shepard; and sampling by Mr. Richard Nichols. Compilations are by Miss Evelyn Caputo, Mrs. Nancy McClellan, Mrs. Shirley Alfonso and Mrs. Barbara Peckham.

Under clause (5) feed is regarded as "mixed to order" and must be so tagged together with the name of the customer for whom it is mixed, or otherwise identified to distinguish it from regular brands offered for general sale. Such feed must be sold only to the customer for whom it was mixed; if sold to others it becomes a regular brand and subject to registration and other provisions pertaining to feeds in general.

REGULATION 2. METHOD OF LABELLING (Sec. 6741)

All concentrated commercial feeding stuffs, other than vitamin D carriers, must be labelled either by a statement printed on the bag or upon a properly attached tag; in the case of concentrated feeding stuff sold in bulk, a certificate which shall contain the information otherwise required to appear upon the bag or upon the tag, may be issued by the dealer in lieu thereof.

The use of wire or any metal in affixing tags is prohibited by law.

The law requires a statement of (1) the net weight of the feed contained in the package; (2) the name, brand or trademark, under which the feed is sold; (3) name and address of the manufacturer or importer; (4) the minimum percentages of (a) crude protein and (b) crude fat, and the maximum percentage of (c) crude fiber contained in the feed; (5) the separate ingredients of which the feed is composed.

While the law requires only a statement of the items enumerated above, no objection will be raised to more complete statements of chemical composition or formula.

REGULATION 3. CONCERNING VITAMIN D CARRIERS

Vitamin D carriers are required to be registered in the same manner and under the same conditions as obtain for feeds in general.

Information to be given on labels and in applications for registrations is (1) name of product; (2) vitamin D potency in terms of A. O. A. C. chick units per gram; (3) name and address of manufacturer, distributor or other person responsible for the product; and (4) on the label, a statement of net weight or volume.

The A. O. A. C. chick unit is the vitamin D activity produced by one U. S. Pharmacopoeia unit of vitamin D from the U.S.P. "Reference Cod Liver Oil", determined by the method of assay adopted by the Association of Official Agricultural Chemists.

REGULATION 4. CONCERNING COTTONSEED MEAL, ETC.

Cottonseed meal, linseed meal, soybean meal, and other vegetable feeds that are sold as fertilizer, are required to be registered under the provisions of the fertilizer law in addition to registration as feeds. If sold exclusively for one or the other of these purposes, the articles may be registered only under the law which applies.

For such of these articles as are used for fertilizer purposes chiefly or entirely as sources of nitrogen, only nitrogen (or protein) need be declared in the application for registration as fertilizer; and the tags or labels generally attached to such articles when intended for feeding purposes will be acceptable for them when sold as fertilizer.

REGULATION 5. DUTIES OF MANUFACTURERS, JOBBERS AND
DEALERS WITH REFERENCE TO REGISTRATION
(SEC. 6742)

All concentrated commercial feeding stuffs, including vitamin D carriers, must be registered with The Connecticut Agricultural Experiment Station annually on January 1, or before they are offered for sale. Registration blank forms are supplied by the Station.

Manufacturers, jobbers or individuals shipping feeds into Connecticut will be expected to register their brands and pay the necessary fees thereon. *Connecticut dealers should assure themselves that the brands they handle are properly registered and labelled. In case the manufacturer or jobber outside the State neglects or refuses to register, the dealer who handles such feeds will be held responsible for such registrations, registration fees and other legal requirements.*

Dealers within the State who mix their own brands are responsible for the registration and proper labelling thereof.

REGULATION 6. DEFINITIONS OF TERMS USED IN THE LAW
AND OF OTHER TERMS

Person. The term "person" imports the singular or the plural as the case demands; and includes corporations, companies, societies and associations.

Importer. The term "importer" is defined in the act.

Brand. It is held that a distinct brand name, or a distinct analysis, constitutes a distinct brand.

Definitions for Feeding Stuffs. The definitions and standards for feeding stuffs adopted from time to time by the Association of American Feed Control Officials are accepted as official in carrying out the provisions of this law; and the rules and regulations as adopted by that association are accepted as far as possible and when not inconsistent with the Connecticut Statutes.

REGULATION 7. METHODS OF ANALYSIS
(SEC. 6741)

The methods of analysis employed shall be those prescribed by the Association of Official Agricultural Chemists, wherever such methods have been adopted for the determinations desired.

REGULATION 8. CONCERNING MEDICATED FEEDS AND MINERAL MIXTURES

The law does not include medicated products used as "conditioners" for stock and poultry, and which consist essentially of substances possessing, or claimed to possess, medicinal or condimental properties; nor does it include products consisting of supplemental minerals.

REGULATION 9. FEEDS IN DIFFERENT PHYSICAL FORMS

The same feed offered in different physical forms, e. g., mash and pellets, requires but one registration.

REGULATION 10. REVISIONS AND SUBSTITUTIONS OF REGISTRATIONS

A feed registration after being filed may be revised without payment of an extra registration fee.

A brand of feed duly registered and subsequently discontinued may be replaced by another brand for the unexpired period of registration without payment of an extra registration fee.

REGISTRATIONS

For the period January 1, 1953, to December 31, 1953, 237 firms registered 1,367 brands of feeding stuffs, and 15 firms registered 50 brands of vitamin D carriers.

As required by statute the registrations are listed as follows:

SUMMARY OF INSPECTION

In the calendar year 1953, a total of 2,042 samples was examined. This total included official samples of commercial feeds and vitamin D carriers, and miscellaneous materials as shown in the following summary:

Biological specimens analyzed for poison	229
Check feeds, A. A. F. C. O., etc.	16
Commercial feeding stuffs, official samples	937
Fish foods	3
Medicated feeds	53
Miscellaneous feeds, etc., analyzed for purchasers	106
Pasture grass, etc., samples for Storrs Station	628
Vitamin D carriers, official samples	70
	2,042

Samples examined for Storrs Station are in connection with investigations carried on by that Station and are not for discussion in this report.

COMMERCIAL FEEDING STUFFS

The results of analysis of official inspection samples, other than vitamin D carriers, are summarized as follows:

Total number of samples	937
Samples deficient in:	
one item	77
two items	7
Percentage of samples meeting guaranties	91
Total guaranties made	2,799 ¹
Guaranties not met:	
protein	33
fat	49
fiber	9
Percentage of guaranties met	97

Twenty-three less samples were found deficient in 1953 than in 1952. For the fifth successive year deficiencies in fat have considerably exceeded those for any other ingredient; the cause of this is probably failure of mixers to take into account the fact that the more efficient extraction processes now in use leave less fat in vegetable meals than did the methods formerly employed.

The percentages of samples meeting all guaranties (91), and of guaranties met (97), were both higher this year than in 1952.

Chemical analyses of official samples are given in Table 1; deficiencies are shown in **bold face type**.

VITAMIN D CARRIERS

Seventy samples of vitamin D carriers were tested during the year. Results of biological tests are summarized in Table 2; assays of poultry feed supplements were made by the official A.O.A.C. method using

¹Seven samples with two guaranties, one with only one guaranty and one with no guaranty.

day-old chicks, while feed supplements for four-footed animals were assayed by the U.S.P. method using rats. Sixty-nine samples, or 99 per cent, met their guaranteed potencies or were sufficiently close thereto to be passed; only one sample ("Blue Ribbon 'E' Mulsion", made by Merchants Creamery Co., Cincinnati, Ohio) was deficient. During the entire 17-year period from 1937 to 1953 inclusive, 891 samples have been examined, of which 801, or 90 per cent, have been passed.

The former A.O.A.C. chick unit for vitamin D was abolished by the Association of Official Agricultural Chemists in 1950. Since it is now an obsolete unit, it has no longer any proper place on feed labels. Since 1951 we have followed the practice recommended by the Association of American Feed Control Officials of requiring guaranties for vitamin D poultry supplements to be in terms of International chick units per pound. Vitamin D carriers intended for use by four-footed animals should be guaranteed in terms of U.S.P. units per gram.

MEDICATED FEEDS

Medicated feeds are still not required to be registered under the feeding stuffs law, but they are analyzed every year for their drug contents. Forty-two samples of sulfaquinoxaline feeds, and 11 nitrophenide feeds, or a total of 53 medicated feed samples, were analyzed during 1953. Most of these samples were taken by Inspector William Stroffolino of the Food and Drug Commission. Analyses are given in Tables 3 and 4; deficiencies are in **bold face** type. Of the sulfaquinoxaline feeds 33, or 79 per cent, were passed; eight, or 73 per cent, of the nitrophenide feeds were passed.

The addition of organic arsenicals such as 3-nitro-4-hydroxyphenylarsonic acid and arsanilic acid to poultry feed has begun to make its appearance. These compounds are added in very small proportions (0.005 to 0.01 per cent) for the purpose of improving feathering of the birds; tests appear to have shown that none of the arsenic is carried over into the meat. One of the 1953 sulfaquinoxaline feeds contained 3-nitro-4-hydroxyphenylarsonic acid, and four of the nitrophenide feeds contained arsanilic acid; all five samples were analyzed for the arsenicals as well as for the respective anticoccidial drugs, and all except one met their guaranties. (The one exception was a sample of "B-B Ma-Co Nitrophenide Arsanilic Acid Broiler Ration" which was deficient in arsanilic acid.)

FISH FOODS

Analyses of seven commercial fish foods were given in the 1952 Report.¹ In 1953 three more such preparations were analyzed, as follows:

4426. *Fish-Ade Tropical Fish Food*. Aquarium Research Corp., Wantagh, N. Y. Declared to contain "toasted wheat cereal, dehydrated beef, fish and liver meal, raw bone meal, soy bean meal, wheat germ,

¹Conn. Agr. Expt. Sta., Bul. 573, 116 (1953).

wheat middlings, alfalfa leaf meal, brewers' yeast, dehydrated carrots, carotene, cod liver oil, irradiated yeast, iron, ammonium citrate, fractionated liver, and enriched with TERRAMYCIN, XANTHO and B-12". Microscopic examination showed the presence of wheat germ meal, fish meal, alfalfa meal or alfalfa leaf meal, wheat middlings, raw bone, salt, and probably soybean oil meal, but no "toasted wheat cereal", dehydrated beef, liver meal, yeast or dehydrated carrots could be found; there is no such substance as "Xantho". Analysis showed: Water, 8.02; protein, 28.50; fat, 5.04; fiber, 2.65; nitrogen-free extract, 42.51, and ash, 13.28, per cent.

4427. *Longlife Medium Tropical Fish Food*. Longlife Fish Food Products, Union City, N. J. Labelled "Ingredients: Crab meal, liver, shrimp, beef, fish, mosquito larvae, eggs, fish bone and wheat cereal". Microscopic examination showed the presence of fish bone and calcium carbonate; fish meal, wheat cereal and crab meal were probably also present. Analysis was as follows: Water, 6.81; protein, guaranteed 35, found 31.06; fat, guaranteed 7, found 7.73; fiber, guaranteed 3, found 1.88; nitrogen-free-extract, 35.81, and ash, 16.71, per cent.

4428. *Sus-Tane Medium*. Aquarium Research Corp., Wantagh, N. Y. Labelled "Nutritious contents: Wheat flour, meat meal, bone meal, wheat bran, wheat germ meal, tomato pulp, irradiated dried yeast, B-Y, 1% Micro Conc. [CaSO_4 , MnSO_4 , KI, FeSO_4 , $\text{Cu}_2\text{CO}_3(\text{OH})_2$], salt, Vitamin A Feeding Oil, dried skim milk, brewers dried yeast." Microscopic examination indicated the presence of bone, tomato pulp, salt, calcium carbonate and probably meat meal, as well as a trace of wheat bran. Analysis was as follows: Water, 8.19; protein, guaranteed 20, found 22.44; fat, guaranteed 3.5, found 3.26; fiber, guaranteed 2, found 1.39; nitrogen-free extract, 58.49, and ash, 6.23, per cent.

MISCELLANEOUS FEEDS

One hundred and six unofficial samples of feed and fodder materials were examined. This total included commercial feeding stuffs analyzed at the request of purchasers and dealers, as well as a number of samples of hay and silage submitted by farmers. Seven feeds were analyzed for the Federal Correctional Institution at Danbury, including two containing sulfaquinoxaline. One sulfaquinoxaline feed, 3548, analyzed for a poultryman, was found to contain only 0.0075 per cent of the drug; another broiler feed sample, 5914, contained 0.0198 per cent of nitrophenide—about one-and-one-half times the normal concentration.

Three samples of silage were analyzed for lactic and other acids as well as for the usual feed ingredients. Sample 4648 (a soybean-millet silage) contained only 0.017 per cent of lactic acid but 1.60, 0.21 and 1.93 per cent respectively of acetic, propionic and butyric acids, indicating abnormal fermentation. (According to Morrison's "Feeds and Feeding",¹ normal silage contains 1.2—2.4 per cent of total acids, mostly lactic acid.) Sample 6137 contained 0.18 per cent of lactic acid and 1.63

¹21st Ed. (1948), p. 318.

per cent of acetic acid, and sample 6552 (a corn silage) contained 0.05 per cent of lactic acid and 0.046 per cent of acetic acid.

A number of the feeds were submitted with complaints that animals refused to eat them or because contamination with poisonous ingredients was suspected. Six samples were found to be contaminated: A dog food, 4212, contained 30 parts per million of lead; two other dog food samples, 4598 and 4599, each contained 25 p.p.m. of hydrocyanic acid retained from a fumigation; a sample of soil from a barnyard where goslings were raised contained 6 p.p.m. of arsenic; and a sample of corn, 6414, and of soil from around where chickens were pecking, 6413, contained 11 and 6 p.p.m. respectively of arsenic, present as lead arsenate. Besides these, in a collection of 14 miscellaneous materials submitted in an attempt to discover the origin of lead-poisoning in a flock of sheep we found five lead-zinc paints and a lead arsenate sheep drench. To our surprise we learned that each lamb in the flock had been given routinely one and one-half ounces of this drench, containing 0.5 gm./fl. oz. of lead arsenate together with an unspecified quantity of phenothiazine.

BIOLOGICAL SPECIMENS EXAMINED FOR POISONS

Two hundred and twenty-nine biological samples were examined in connection with suspected poisoning, mostly of domestic animals and poultry. In 70 of these, poisonous substances were found in sufficient quantity to suggest probable or possible causes of death.

The poisonous materials, and the number of specimens in which they were found, are summarized as follows: Antimony with barium (1), arsenic (2), arsenic with bismuth (1), arsenic with copper (Paris Green) (1), "benzene hexachloride" (2), beryllium (16), boron (boric acid or borax) (1), cadmium (3), cadmium with lead (1), cadmium with mercury and zinc (2), cyanide (4), DDT (1), lead (20), lead with zinc (2), mercury (7), strychnine (2), thallium (2) and zinc (2). The predominant poisons were lead (23 cases) and beryllium (16 cases). (The beryllium samples, however, were air filter samples taken in factories by the Bureau of Industrial Hygiene of the State Department of Health and therefore represented potential rather than actual poisonings.) The seven cases of mercury poisoning, as well as the one case in which mercury was found together with cadmium and zinc, were all out-of-the-ordinary in that neither cattle nor poultry were involved: the poisoned animals included three chinchillas, two human beings, a cat, a raccoon and a squirrel. The only case of DDT poisoning was a canary which died two days after spraying of a kitchen with a 5 per cent DDT spray; 11 parts per million of this compound were found in the bird. The two cases of probable hexachlorocyclohexane ("benzene hexachloride") poisoning involved a dog and a pig; the proportions found were 6 and 4 p.p.m. respectively. Thallium was detected in the urines of two dogs, and both strychnine cases also involved dogs (0.09 and 0.37 grain respectively of strychnine were isolated from the two animals).

The number of samples submitted for toxicological examination has been constantly increasing: the 229 samples received in 1953 were an increase of 26 per cent over the 182 samples of 1952, and exceeded by 71 per cent the 134 samples of five years ago and by 214 per cent the modest 73 samples received in 1943.

CHECK FEEDS

Six check feed samples were analyzed in the check feed program sponsored by the Association of American Feed Control Officials, and nine samples of alfalfa were analyzed for carotene in a program also sponsored by that association. One mineral feed was analyzed in a collaborative study of methods for the determination of copper that was conducted by the Association of Official Agricultural Chemists.

DETERMINING GUARANTIES

The most reliable way to determine safe guaranties for feed mixtures is by analysis. Larger manufacturers with laboratory facilities follow this method. Small manufacturers and home mixers are without such facilities and they must resort to other means. A close estimate can be made by a simple calculation using as a guide the analysis tags on the ingredients to be mixed.

If, for example, a mixture is to be made with cottonseed meal, corn meal, ground oats, gluten feed and wheat bran as ingredients, we may assume that the tags for these several ingredients show the following percentages of protein, fat and fiber:

Ingredient	Protein per cent (lbs. per 100)	Fat per cent (lbs. per 100)	Fiber per cent (lbs. per 100)
Cottonseed meal	41	7	11
Corn meal	24	2	11
Ground oats	12	5	11
Gluten feed	25	2	7
Wheat bran	16	5	10

Remembering that per cent means pounds per 100 pounds, then 100 pounds of each of the materials listed above will contain the number of pounds of the several nutrients shown.

If the formula to be mixed calls for the pounds of ingredients shown in column 1 below, then the pounds of the several nutrients will be as shown in columns 2, 3 and 4. The total weight of the mix is seen to be one ton (20 hundred pounds), so the analysis of the finished product is found by dividing the totals by 20, or by moving the decimal point one place to the left and dividing by 2.

Example

Column 1	2 Protein lbs.	3 Fat lbs.	4 Fiber lbs.
Cottonseed meal200 lbs.	82	14	22
Corn meal200 lbs.	48	4	22
Ground oats600 lbs.	72	30	66
Gluten feed300 lbs.	75	6	21
Wheat bran700 lbs.	112	35	70
Totals 2,000 lbs.	389	89	201
Per cent	19.45	4.45	10.05

Mixers should remember that for protein and fat the guaranties are minimum values; for fiber the guaranty is the maximum. In other words, the manufacturer guarantees that protein and fat will not be less than the percentages declared, and in the case of fiber that it will not exceed the figure declared.

TABLE 1. ANALYSES OF COMMERCIAL FEEDS, INSPECTION OF 1953

Station No.	Manufacturer and brand	Retail dealer in Connecticut	Pounds per hundred (or per cent)						
			Moist- ure	Protein (N x 6.25)		Fat		Fiber
