REPORT ON INSPECTION AND ANALYSIS OF
COMMERCIAL FERTILIZERS

1963

H. J. Fisher, Chief Chemist¹

CONNECTICUT LAW AND REGULATIONS REGARDING
COMMERCIAL FERTILIZERS

The term "commercial fertilizers", as used in the Connecticut fertilizer statute, includes "any and every substance imported, manufactured, prepared or sold for fertilizing or manuring or soil amendment purposes, except barnyard manure and stable manure which have not been artificially treated or manipulated, marl and lime." An amendment of the law in 1949 permitted fertilizers to be labelled with guaranties of elements other than nitrogen, phosphorus and potassium, but did not change the requirement that mixed fertilizers must contain at least 0.82 per cent of nitrogen, and 1 per cent of either phosphoric acid or potash, for guaranties of these elements to be made. Phosphorus must be declared as available phosphoric acid (except in the case of bone, tankage and other natural organic materials, where total phosphoric acid is guaranteed), and potassium as water-soluble potash; all other elements must be guaranteed in terms of percentages of the elements, not as oxides or salts. A registration fee of \$10.00, payable annually, is charged for each element guaranteed in each brand of fertilizer; there is also a six cent tonnage tax, payable semi-annually.

While manufacturers usually register their own fertilizers, if a retailer sells a fertilizer manufactured by an out-of-state firm, and that firm refuses to register, under the law the retailer is responsible for registration fees and tonnage taxes. The retailer, therefore, should assure himself that the requirements of the law have been met by the manufacturers of the brands which he handles, or himself be prepared to meet all these requirements.

The law exempts from registration, and from other requirements, only: (1) fertilizers passing through the State in transit; (2) fertilizers and fertilizer materials shipped to regular fertilizer factories to be used for manufacturing purposes; and (3) fertilizers and fertilizer chemicals sold to The Connecticut Agricultural Experiment Station for experimental purposes.

Cottonseed, linseed, peanut and soybean oil meals, when sold or used for fertilizer purposes must be registered as fertilizers and the specified

¹ Analyses were made by Messrs. Richard A. Botsford, Sherman Squires, Werner Mueller, Charles Hahn and Miss Helen Kocaba; inspection and sampling by Mr. R. Richard Nichols; compilations by Mrs. Arnold Malmberg and Mrs. Marshall S. B. Brown.

fees paid thereon. For such products the registration fee is \$10.00 per brand. This fee and the tonnage tax are entirely apart from the registration fee required by the feeding stuffs law for vegetable meals used as feeds (there is no tonnage tax on feeds).

Because manufacturers or jobbers do not know how much, if any, of their vegetable meal tonnage is sold or used as fertilizers, local dealers and purchasers report their sales or purchases to this Station. This information is not for publication but is used to inform manufacturers of the total sales of their meal as fertilizer in this State. It is expected that the fees provided for by statute will be paid by the manufacturer or other party responsible for the brands.

OFFICIAL DEFINITIONS OF FERTILIZER TERMS AND MATERIALS

It is expected that fertilizers sold in this state will comply with the regulations and standards of the Association of American Fertilizer Control Officials. A copy of the "Official Publication" of that Association giving these definitions and regulations may be obtained from the secretary-treasurer, B. D. Cloaninger, Drawer 392, Clemson, South Carolina, for \$2.00.

REGISTRATIONS

For 1963, 120 firms and individuals registered 624 brands of fertilizer at this Station for sale in the State. As required by statute, the brands are listed as follows:

A-PENN OIL CO., P. O. Box 191, Butler, Pa.

(Registered by International Minerals & Chemicals Corp.,
Woburn, Mass.)

Marvel Green Lawn Builder 20-10-5

AGRICULTURAL PRODUCTS CO., INC., 589 Atwells Ave.,
Providence, R. I.

Blue Ribbon 5-10-5 Fertilizer Lawn-Garden

Golden Comet 10-6-4 Lawn Food

Guardian 8-6-4 Gro-Green Lawn Fertilizer

Super Turf King 10-6-4

Turf King Lawn & Garden Fertilizer 5-10-5

AGRICULTURAL SUPPLY CO., 221 Richmond Ave., West
Haven, Conn.

Yale Special Mixture 8-6-2

ALASKA FERTILIZER CO., 84 Seneca St., Seattle 1, Wash.

Alaska 100% Organic Deodorized Fish Fertilizer 5-2-2

ALLIED CHEMICAL CORP., Nitrogen Division, P. O. Drawer 61,
Hopewell, Va.

"Arcadian" A-N-L Fertilizer Compound

FERTILIZER INSPECTION FOR 1963

The Connecticut fertilizer law does not provide for compulsory limitation of the grades of fertilizer that may be sold in this State, but because it is generally agreed that a small number of grades can take care of all the needs of agriculture, and that standardization on a few grades will promote economy of manufacture and consequent lower prices, the New England agronomists have from time to time compiled lists of recommended fertilizer ratios and minimum grades.

The latest list of ratios, as finally approved at a meeting in Burlington, Vermont on June 19, 1961, and the most common market grades, are as follows:

Ratio	Most Common Grade
0-1-1	0-20-20
0-1-2	0-15-30
0-1-3	0-10-30
0-1-4	0-10-40
0-3-1	0-30-10
1-1-1	10-10-10
1-2-2	5-10-10
1-4-2	3-12- 6
2-1-1	10- 5- 5
2-1-2	6- 3- 6
2-3-3	8-12-12
3-2-2	15-10-10
3-4-4	6- 8- 8
4-2-3	16- 8-12
4-3-1	8- 6- 2

Sixty-nine per cent of the mixed fertilizers sold in this State during the 1962-1963 season were of the recommended ratios in grades whose plant food content equalled or exceeded the "most common grades" listed above. Five grades each of which sold at least 1,000 tons (5-10-5, 8-6-4, 8-10-10, 10-6-4 and 20-10-5) took care of another 22 per cent. The numerous remaining grades accounted for only nine per cent of the total tonnage. This total exceeded that for the 1961-1962 season by only 169 tons.

During the past season the Station agent collected samples of all registered brands that could be found on the market. The total number of official samples was 577.

The following tabulation lists the number of samples analyzed (both official and unofficial) of each class of fertilizer, as well as the tonnage sold during the period between July 1, 1962 and June 30, 1963:

CLASSIFICATION OF FERTILIZER MATERIALS AND
FERTILIZER TONNAGE

(Tonnage is for the period of July 1, 1962 to June 30, 1963)

	No. of Samples	Tonnage	
I. Containing chiefly nitrogen:			
Nitrate of ammonia	4	380	
Nitrate of soda	3	259	
Sulphate of ammonia	1	71	
Cyanamid	1	110	
Urea	7	446	
Nitrogen solutions	-	539	
Castor pomace	5	1,116	
Cottonseed meal	52	3,320	
Dried blood	4	5	
Horn and hoof meal	1	12	
Linseed meal	7	130	
Soybean meal	3	249	
Tankage	1	11	
Other materials	7	523	
			7,171
II. Containing chiefly phosphoric acid:			
Superphosphate 18%	-	31	
20%	7	3,393	
46%	5	269	
Dicalcium phosphate	2	392	
Phosphate rock	2	30	
Precipitated bone	1	231	
			4,346
III. Containing chiefly potash:			
Muriate of potash	4	201	
Sulphate of potash	1	91	
Sulphate of potash-magnesia	-	12	
Cotton hull ashes	7	267	
Other materials	1	-	
			571
IV. Containing nitrogen and phosphoric acid:			
Dry ground fish	9	214	
Bone meal	16	282	
Diammonium phosphate	1	42	
Other materials	1	1,145	
			1,683
V. Containing nitrogen and potash:			
Nitrate of potash	5	142	
Nitrate of soda-potash	1	-	
			142

		Grand total	49,342

I. Materials Chiefly Valuable for Nitrogen

Analyses of 62 official samples of nitrogenous materials are given in Table 1. Fifty-nine of these met their guaranties and three were deficient. The substandard samples included two of dried blood and one of ammonium nitrate.

II. Materials Chiefly Valuable for Phosphoric Acid

Analyses of seven official samples of 20 per cent superphosphate and four of the 46 per cent grade, and two each of dicalcium phosphate and phosphate rock, are given in Table 2. Of the total of 15 samples, 13 met their guaranties, while one each of "triple" superphosphate and dicalcium phosphate was deficient.

III. Materials Chiefly Valuable for Potash

Five samples of cotton hull ashes, four of muriate of potash, and one each of sulphate of potash and "fritted potash", were analyzed; results are given in Table 3. All samples met their guaranties except one each of muriate and sulphate of potash.

IV. Materials Supplying Nitrogen and Phosphoric Acid

This group consists chiefly of dry ground fish and bone meal. Guaranties of "available" phosphoric acid are not required of such natural products, and most of them guarantee only total nitrogen and total phosphoric acid. Sixteen official samples of bone meal, five of dry ground fish, and one each of "Milorganite" (a treated sewage sludge) and diammonium phosphate, were analyzed in 1963. All samples were passed except two of bone meal and the diammonium phosphate sample; these three were deficient in nitrogen. Analyses are given in Table 4.

V. Materials Supplying Nitrogen and Potash

Two official samples of nitrate of potash and one of nitrate of soda-potash were analyzed; all three met their guaranties. Analyses are given in Table 3.

VI. Mixed Fertilizers

Commercial Mixtures

Analyses of 361 official samples of mixed fertilizers are given in Table 5. Results are summarized as follows:

Total number of samples		361
Samples deficient in:		
one item	94	
two items	16	110
Percentage of samples meeting all guaranties		70
Total guaranties made. ¹		1,055

¹ Three hundred and thirty-three samples with three guaranties and twenty-eight with two guaranties (minor element guaranties not included).

Guaranties not met:		
nitrogen	49	
phosphoric acid	48	
potash	29	126
Percentage met		88

Eighty-eight per cent of all guaranties of major components were substantially met or exceeded.

Twenty-nine samples guaranteed between 0.6 and 2.4 per cent of magnesium (mostly 1.2 per cent) in addition to the major components; only one of these was low. Eight samples declared between 0.036 and 0.75 per cent of iron; and seven bore guaranties of 0.02 to 0.30 per cent of boron; none of these was below guaranty, but the actual iron contents were several times the guaranties in all cases. One sample guaranteeing 0.15 per cent of manganese was deficient in this element; another which guaranteed only 0.05 per cent met its guaranty. Single guaranties of calcium (1.0 per cent), copper (0.05 per cent), sulphur (1.0 per cent) and zinc (0.05 per cent) were made and met.

Special and Home Mixtures

Five samples of special and home mixtures were analyzed during the year. At one time hundreds of such samples were submitted annually to us by tobacco growers, but of late years the larger growers have mostly had their analyses made privately. Because the composition of the five 1963 samples is not of public interest their analyses are not tabulated in this bulletin.

State Purchases of Fertilizer

Fertilizer materials and mixed goods supplied to State institutions on State purchase orders are regularly included in our annual inspection. Fertilizers so supplied are not exempt from payment of registrations fees and tonnage taxes.

Official samples representing State purchases are indicated in the several tables (it should be noted that only official samples, and not those taken directly by the State Highway Department are included). They are summarized as follows:

<u>Materials</u>	<u>No. of samples</u>	<u>Reference</u>
Supplying nitrogen	4	Table 1
Supplying phosphoric acid	3	Table 2
Supplying potash	1	Table 3
Supplying nitrogen and phosphoric acid	2	Table 4
Mixed fertilizers	31	Table 5
Total	41	

VII. Miscellaneous

Sheep and cattle manures. Manures must bear guaranties of nitrogen, either total or "available" phosphoric acid, and potash.

Of the 19 official samples analyzed during the 1962-1963 season, 18 met all guaranties and one was deficient in potash. Analyses are given in Table 6.

Limestone and similar materials. Because the fertilizer law exempts "marl and lime" from its provisions, no regular inspection of liming materials is made. Occasional samples of limestone, hydrated lime and gypsum ("land plaster") are analyzed for farmers. Analyses of five such samples are given in Table 8.

Fertilizers sold in small packages. Fertilizers sold only in packages of 10 pounds or less net weight are not required to be registered. Nevertheless, as a service to home gardeners such brands of small package goods as come to the attention of our agent are sampled and analyzed. During the 1962-1963 season 81 such samples were analyzed. Sixty-nine of these, or 85 per cent, met all guaranties, and 94 per cent of the total of 235 guaranties were met. These are higher percentages than were found for agricultural fertilizers. Analyses are given in Table 7.

Other miscellaneous materials. Ten other miscellaneous products were examined; analyses are given in Table 8. This total includes two official samples of borax.

Check meals and fertilizers. Collaboration was continued with the various check analysis programs. Samples analyzed included: Sixteen vegetable meal samples received from the American Oil Chemists' Society; twelve check fertilizers supplied by the National Plant Food Institute; and two miscellaneous samples submitted in connection with methods studies.
