 Bugbane
 Cranesbill
 Solomon's Seal

Trees

Dogwood, Corneliancherry
 Dogwood, Kousa

Other Plants

English Ivy
 Sweet Woodruff
 Wisteria, Japanese

For more information on scientific names and plant characteristics refer to: www.ct.gov/caes/

This pamphlet was an independent project by John Duclos while a student at Central Connecticut State University with Rose Hiskes and James LaMondia of the Connecticut Agricultural Experiment Station.

*Trees with a G designation are found throughout the grounds.

**Kousa dogwood, English ivy, Sweet Woodruff and Japanese wisteria were already in place when the native garden was installed. Korean Spice Viburnum is used because it is resistant to viburnum leaf beetle, a pest likely to become problematic in Connecticut.
