**Subject:** Weaning ourselves off of fossil fuels

Please have your group develop a thoughtful, but expedited plan to get us off fossil fuels. We don't use horses and buggies, we don't use iceboxes. It took a while for the US to totally electrify the country. No one in obsolete industry appreciates the change, but it has to happen, and so it is with coal, oil and natural gas. We need to get on this right away, and move business, finance and research and development toward a fossil fuel free energy program. Business will survive this change. But if we don't make the change, we will have huge expenses and problems ahead. Thank you, folks! Julia Sherman, Mansfield Connecticut.
