Dear Mr. Padka,

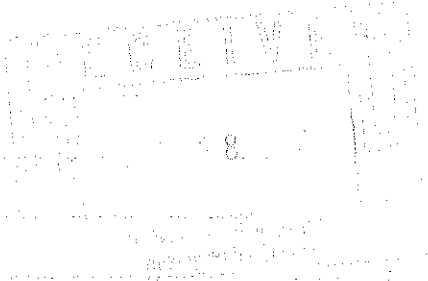

as you are aware, we are in the
midst of a severe drought.

I'm writing this letter because
myself and many others feel there is a
need for a regional water strategy.

Safe drinking water is paramount
while allowing for environmental protection.
Water conservation should be practiced by
large private users as well as the general
public.

We should all have a say in this process.
Thank you for your time.

Sincerely,
Michael Kubit

Orange, CT 06477

Dear Mr. Radka

As a concerned citizen, I m writing to reinforce your awareness of the water problem in Connecticut. The need for clean drinking water, as well, as clean water for wildlife is essential. You, as our representative, must prioritize the public welfare over that of the corporations. We need to protect our environment while allowing for economic development. However, we cannot not ignore the public need, in lieu of corporate needs. We must require conservation by large private users, and water utilities, as well as, the general public. In addition, there must ample time for citizen put during the plans development and implementation of said projects.

During this drought especially, I would expect our representatives on the Water Planning Council to develop a reasonable plan of action to protect our valuable resource taking in all the considerations of the public.

Thank you

Paul Peddy

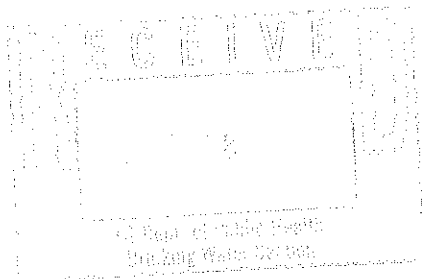

Orange, CT 06477

Mr. Radka,

The plight of our water has been brought to my attention. We need a plan to protect our clean drinking water that prioritizes the protection of our water environment while allowing sustainable economic development. Once a plan is proposed it needs ample opportunities for public comment on development and implementation. The water conservation measures within also need to regulate water utilities and large public users.

I would appreciate anything you can do to move this planning forward. Let me know your thoughts.

Sincerely,

Attention: Bart Halloran, David Radka

CT's clean water supply is very important to my family. Even though we technically have water, we work in the local community and depend on the clean water resources every day for our livelihood. I want to see that we, the public, are provided with ample notification, transparency and a vote over any water issues that may impact this livelihood.

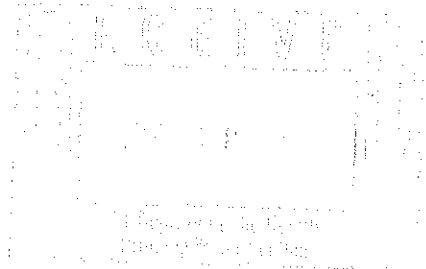

CT needs a regional water planning strategy that:

- Prioritizes the public's need for clean drinking water supplies over corporate or government interests, especially during times of drought and to avoid problems like what Michigan had
- Prioritizes environmental protection for our water while allowing for sustainable economic development
- Provides ample opportunities for public comment during the plan's development and implementation: and
- Requires water conservation measures for water utilities and large private users

Regards,

Lisa Diones

RE: Support for Citizens Campaign for the Environment (CCE)

Dear Mr. Radka,

As a family man and home owner living here in Orange for the past 23 years, it is extremely important for me to see that the Connecticut regional water planning strategy put families water needs first when looking to the future. We taxpayers need to have a transparent process that ensures we are informed each step of the way as the plan develops, and furthermore that we are heard. Therefore, if you would please adopt the following suggestions made by the Citizens Campaign for the Environment (which our family supports) it would be most beneficial for the families of Connecticut, while not having an adverse effect on our state's economic development. Again, as the Water Planning Council and the WUCC develop the long-term water management plan for Connecticut please put the needs of the families first by ensuring the following:

- Prioritize the public's need for clean drinking water supplies over corporate interests, especially during times of drought
- Prioritize environmental protection for our water while allowing for sustainable economic development
- Provide ample opportunity for public comment during the plan's development and implementation
- Require water conservation measures for water supplies and large private users

Most Sincerely,

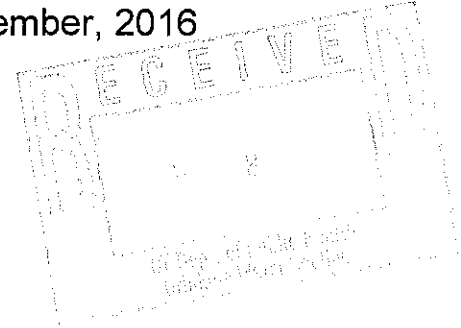

Hugh W. Potter

Ref: Connecticut Long-Term Water Management Plan

Dear Mr. Radka:

I write to you as a concerned citizen and would like to convey the following points concerning the developing regional and state plans:

1. Clean drinking water is essential and should remain in the public trust and carefully stewarded for the benefit of all. We need not mention what has happened in places like Flint, MI.
2. While allowing for sustainable public development, use and environmental protection of water resources should be prioritized for individual residents.
3. Potentially polluting or over-using corporate interests should pay appropriate taxes or be banned from over-use. Although it is yet to be definitively proven that drought periods are long-term and attributable to climate change rather than cyclical activity, it seems that water supplies are trending towards diminishment in many parts of the country. It seems that in periods of reduced availability, conservation measures for water utilities and industrial users must be incorporated into the Long-Term Water Management Plan as a core value.

Thanks for considering these views,

Elizabeth Greenspan

Mr. Halloran,

I am writing to you in response to the CCE representative who came to my door to let me know about pressing issues in regards to our Water. Though I am paying for the service I do not feel that you have the consumer in mind when it comes to issues of the environment specifically the need for clean drinking water supplies over corporate interests especially during these times when water is so scarce.

I am also concerned that the public is not notified when to be available during planning sessions that may impact us specifically during times of drought to voice our concerns. I would like to know that you are making environmental protection for our water a priority while allowing for sustainable economic development.

I look forward to your response for these concerns and the steps that have been set in place for their implementation.

Sincerely,

Janet K Harrison

David Radka
Connecticut Water Company

Dear Mr. Radka:

I am writing to you as a concerned citizen, advocating for a regional water planning strategy in the state of Connecticut. With recent concerns growing in regard to our need for clean water, I would like to stress to you the importance of being vigilant in a quest to prioritize public drinking water supplies and the health of our environment. Private interests are seeking to exploit our resources and as a resident of Connecticut, I am aware that a strong economy in our state will be negatively influenced by a lack of clean and abundant water resources.

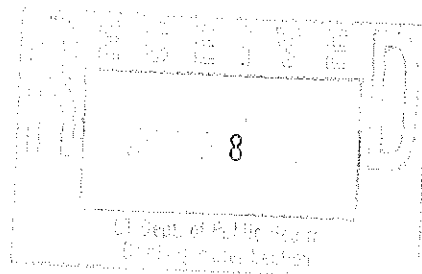

While I do my part to limit unnecessary water use and grow increasingly mindful of how to conserve as a household, I would like to implore you to think about the following ways that we can put into effect a water planning strategy:

- Prioritize the public's need for clean drinking water supplies over corporate interests, especially during times of drought.
- Prioritize environmental protection for our water while allowing for sustainable economic development.
- Provide ample opportunities for public comment during the plans development and implementation.
- Require water conservation measures for water utilities and large private users.

Please hear our collective voices as concerned residents seeking to not only do our part at home, but to advocate for change that effectively implements the suggestions above in an effort to support a healthy environment and protect our supply of clean water.

Sincerely,

Marissa Baglini

Dear Mr. Radtka,

I am writing to urge you to keep CT's water in the public trust. Now, more than ever, as global warming becomes an ever more present danger, burgeoning drought along w/ it, that this needs to be guaranteed. Too often areas of our country are plagued by droughts (or increasingly, and alarmingly) among them. Often, laughably corporations & large private enterprises are given priorities over citizens who need resources to survive.

I ask that you work on a water planning strategy. Under current CT laws, corporations have no limitations, except in extreme droughts, and no department has the authority to enforce them. This is a terrible & generous legislative oversight. We need these limitations in place to protect us & the environment we can't live without. It is our duty to protect the Earth & our fellow man, and we need to see it before it's too late. I know this can be done, however difficult, in a way that still allows economic growth, another necessity for our state to thrive. I make one more request,

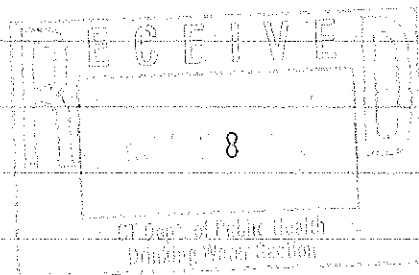

that you be transparent & allow for
public comment when moving forward
w/ a strategy. After all, this is a matter
that affects all of us, & we need to
be able to participate in this discourse.

Mary Shanker.

Ashley Hope

Orange, CT 06477

November 10, 2016

Dear Mr. David Radka,

I am writing to express to you my concerns regarding the need for the state of Connecticut to develop, implement and enforce a regional clean water plan that is equitable to all water users in CT; residential consumers, commercial businesses, manufacturing, industrial and government.

Water is a natural resource that must remain in the public trust. It belongs to all of us. A clear strategic plan for water conservation and use is necessary, especially in times of drought. The public's need for clean drinking water should be the top priority.

Environmental protection of our water supplies must be the first priority while allowing for sustainable economic development. In addition, large utility users and large private users must be required to conserve water in a manner that is equitable. Everyone should do their part. Regulations need to be in place. For example, when residential users conserve water so they are not fined, the water companies cannot turn around and hike rates because they did not make enough profit. The water company has to bear the burden as well. This has occurred in San Diego County, CA.

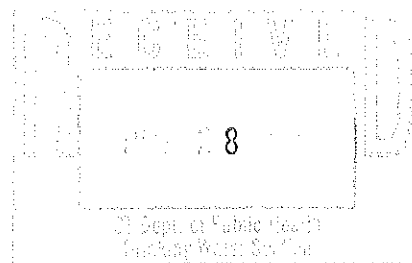

Lastly, it is important that you provide plenty of opportunities for public comment at times and locations that are convenient to the public. Providing ample notification through a variety of communication methods makes for a fair and broader means of hearing not only public concerns but creative ideas and other potential solutions.

I appreciate your time in reading my letter.

To Whom It May Concern,

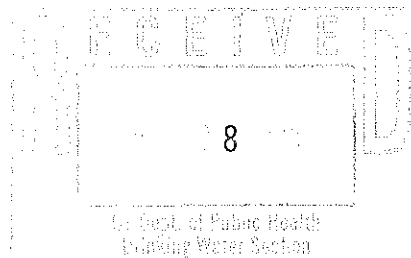

I am writing to express my support for sustainable management of Connecticut's water resources. Our clean water resources provide clean drinking water and support habitat for wildlife, local farms, numerous recreational opportunities, and thriving fishing and tourism industries. While our water resources support a healthy environment and a sustainable economy, growing threats such as drought and excessive water use from large water users put our waters at risk.

Our water is a public resource, and it must remain in the public trust! We urge you to develop a comprehensive water planning strategy that explicitly prioritizes the public's drinking water supply needs and a healthy environment, while allowing for sustainable economic development. The plan must be transparent and allow for ample opportunities for meaningful public participation. The plan must also require water conservation measures for water utilities and other large industrial users, especially during times of drought. Ensuring large users are not wasting water is critical to sustainably managing Connecticut's water supply.

Thank you for your consideration, and please respond in writing with your position on this important issue.

David Radka,

I believe that we need to prioritize our need for clean drinking water. Right now my mother lives in a small town called Skowhegan, Maine. This year here well has been extremely low and as a result her water is dirty and has very high levels of TOXINS. The water at her house has been labeled unsafe to drink. She doesn't have access to public drinking water like I do! So I ask you, "What are you going to do to insure my children's future water supply, their health, and their safety."

Sincerely

Ellen Gonzalez

ATTN: David Radka Connecticut Water Company: Drinking Water Section

Dear Mr. Radka,

This letter is to address the Water Planning Councils water management plan for CT.

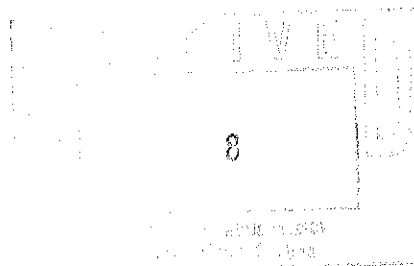

As residents we appreciate the opportunity to engage in thoughtful dialogue – and in meaningful action – to take part in the critical environmental protection issues involved in Connecticut's water plan. Water and our community are strongly interlinked. Water is a vital source of life, and greatly determines a person's 'way of life'. Environmental protection and Clean drinking water must be a priority. We thank you in advance to make responsible decisions in the interest of protecting the water sources, as it will simultaneously protect and improve our community. The community will praise you for putting OUR best interest at the top of the list.

Providing ample opportunity for PUBLIC COMMENT during the plan's development and implementation is extremely important to the people. As well as educating the people about the plan and how it affects their families and their community. **The council's decisions will impact our lives and should involve PUBLIC PARTICIPATION and HONESTY and TRANSPARENCY.** The people must know both pros and cons, as well as be involved in making these decisions as it affects our own future.

Clean and abundant water must take precedence over private interests. Honorably PRIORITIZE the PUBLIC'S NEED over corporate interest especially during times of drought. Water is for life- Not for Profit. As you develop this plan you must consider the potential impact large private users could have on our state's water resources, and **REQUIRE WATER CONSERVATION MEASURES FOR PRIVATE COMPANIES, FACTORIES AND UTILITIES.** Companies and factories in CT should be accountable to REGULATE their water withdrawals, consumption and waste, and LIMIT use as changes in the environment require. Consciousness education among employees made standard procedure would bring awareness to how individual use on premises, equates to large impact when observed among employee factory wide.

Sincerely,

Kimberly Z. Mikita

Hartford, CT 06134-0308

I write this in hopes to support the development for a plan Connecticut's water clean. As an Orange resident and mother of three small children, it is imperative for CT to develop a plan to prioritize the public's need for clean drinking water supplies over corporate interests, especially during times of drought, prioritizes environmental protection for our water while allowing for sustainable economic development, provides ample opportunities for public comment during the plan's development and implementation, and requires water conservation measures for water utilities and large private users.

Thank you,

Dania Gladczuk
64 Hampton Close
Orange, CT 06477

Dear Mr David Rodka

November 11, 2016

I am writing to you on behalf of my fellow Connecticut citizens to urge you and your counterparts to develop a State water plan that puts public drinking water first.

Our water resources are not just threatened by failing infrastructure, industrial pollution, extreme weather events and overuse of waterways but most recently by DROUGHT and PRIVATE INTERESTS. As you know, the drought has been ongoing, without an end in sight and the most recent addition of Niagara Bottling to the state will be placing a large strain on water usage. Apparently Ulster New York felt that this was also the case when Niagara tried to propose building a plant there in 2015. Niagara decided not to pursue building there when opposition began to rise. The opposition they faced there is the same here in Connecticut - the public's need for clean drinking water should be a priority over corporate interests (especially in a drought).

A regional water planning strategy should not just prioritize the public's water needs over large private users/corporations, but should also include -

1. Requiring water conservation measures for water utilities/large private users;
2. Providing AMPLE opportunities for public comment/involvement during the plan's development and implementation.
3. Prioritizes environmental protection for our water supply while allowing for sustainable economic development.

These measures will help to protect/maintain our fragile water system for us now, AND for future generations to come. Your action is needed -

Thank You, Doris Weinstein

To David Raetka,

Please, I implore the importance of protecting our water supply. We have the right to clean drinking water.

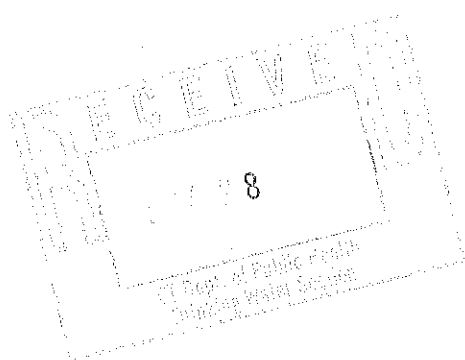

Everyone from private households to corporations have an obligation to conserve water at all times, not only during droughts. Water is what sustains life. If we disregard our usage, we will eventually have a negative outcome.

Strict regulations on usage should be implemented.

Thank you.

Chris Campinski

Dear Mr. Radka,

As a CT resident, I am writing to express my concerns about how water resources are being managed here in CT.

I strongly believe that the Connecticut water resources are extremely important and should remain in the public trust.

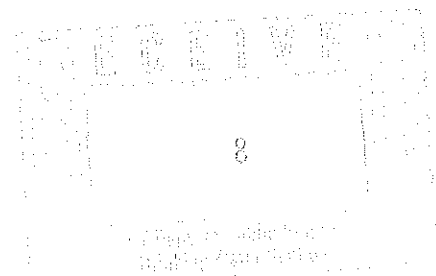

I feel it is very important that CT comes up with a regional water planning strategy whereby the following is considered:

- CT citizens' need for clean drinking water is prioritized over corporate water demands—especially when our water tables are low and we are experiencing a drought.
- We need to protect our water and water sources, all the while allowing for sustainable economic development
- The public needs to have the ability to share their concerns and thoughts on any such plan, and
- Water conservation measures are put in place for water utilities and large private users

Thank you for your consideration. Water is so important to us and to our planet. Please give it the attention and protection it deserves.

Sincerely,

Amanda Wallner

Hartford, CT 06134-0308

Dear Mr. Radka,

While I now live in Queens, NY, I am writing to express my concerns about how water resources are being managed here in CT, having grown up here (and still visiting my parents who remain CT residents).

I strongly believe that the Connecticut water resources are extremely important and should remain in the public trust.

I lived in California for a while when there was a drought, and learned a lot from that experience (never having been through it while growing up on the east coast). As such, I feel it is very important that CT comes up with a regional water planning strategy whereby the following is considered:

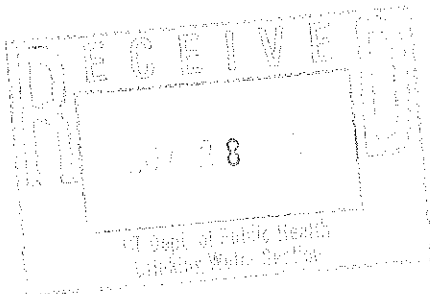

- CT citizens' need for clean drinking water is prioritized over corporate water demands—especially when our water tables are low and we are experiencing a drought.
- We need to protect our water and water sources, all the while allowing for sustainable economic development
- The public needs to have the ability to share their concerns and thoughts on any such plan, and
- Water conservation measures are put in place for water utilities and large private users

Thank you for your consideration. Water is so important to us and to our planet. Please give it the attention and protection it deserves.

Sincerely,

Abbie Leabo

Gentlemen:

As a concerned citizen of Connecticut I am asking you to support the water conservation initiatives as espoused by CITIZENS CAMPAIGN FOR THE ENVIRONMENT. Please exercise every effort to formulate a planning strategy that prioritizes the public's need for clean drinking water availability over corporate interests, protects the water supply from adverse environmental conditions, establishes regulatory conservation measures for large private users and utilities, and insures the public's right to participate in planning and implementation of any initiatives to accomplish these goals.

Very truly yours,

Kenneth D. Wilson

P.O. Box 340308
Hartford, CT 06134-0308

Dear Mr. Radka,

It is imperative that we protect our environment to ensure our limited resources will be available in the future. This is important when dealing with our water supply and critical in times of drought. Nobody can predict what the future will bring, so we **MUST** take action in the present. Connecticut cannot wait for a disaster before addressing this issue.

We must have a plan in place that specifies conservation measures for all Connecticut residents and businesses, especially water utilities and large private users. Without this, we can only rely on hope for enough precipitation in the future.

Any plan must not be made behind closed doors. The citizens of Connecticut need to be involved, if only through opportunities for public comment.

Please help protect our future today.

Sincerely,

Ethan Rappaport
119 Kennedy Drive
Orange, CT 06477

11/17/16

David Radka,

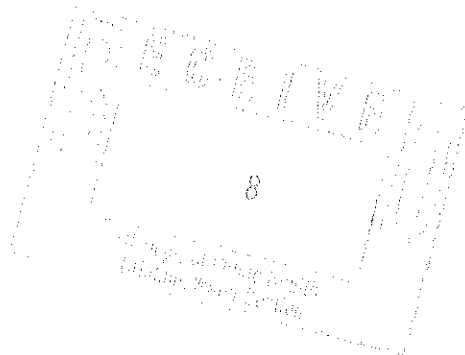

As you already know, our Connecticut waters is a renewable resource that has many uses for everyone, and it is important to protect it for future generations. This water was here before mankind and will still be here when we leave. The question is what condition will we leave it.... clean or polluted. You have the responsibility and the trust of the people of Connecticut to ensure the natural resource is a public trust for all to enjoy and grow. Above all potential personal gain, remember your decisions in the water policy making affects all of us into the next generations. So, I implore you to always provide ample opportunities for the public to comment on all your plans to get the best possible outcome for many advisors ensures victory. I hope that you will include water conversation measure during plenty and drought conditions for the water utilities, business, and the large private users. Thank you for your time.

Mr. David Radka
Connecticut Water Company

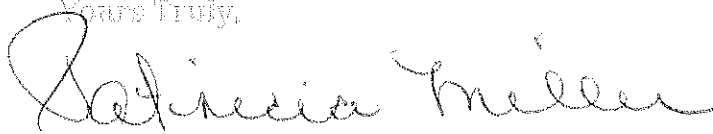

Dear Mr. Radka:

I am writing to you as a concerned citizen. Environmental issues are critical issues in today's world, and we must provide environmental protection for our drinking water. The public has an urgent need to have clean, unpolluted drinking water in order to survive. We are experiencing a drought as you know. Protection of our water, as well as conservation of water supplies, must be a top priority for the Commission as well as the general public. Corporate interests should not prevail over the public's need for clean drinking water.

For our civilization to prosper, we need sustainable development as well. This is a challenge that must be met. Conservation measures for water utilities and large private users must be utilized in order to protect our environment, especially our water.

I urge you to give your attention to this matter. It is of prime importance, an issue that merits everyone's commitment for change.

Yours Truly,

Patricia Miller

Dear *David Raolka*

Please accept this letter as my request for a CT regional water planning strategy that will put the public's need for clean water as the top priority. In times of drought we (the public) should NOT take a back seat to the corporate interests!

The strategy should include ample opportunity for the public to voice their concerns and or ideas.

There should also be a water conservation measure for water utilities and large private users.

Thank you in advance for your interest in moving forward with a solution to this matter.

Sincerely,

Brent Thompson

Dear Mr. Radka,

I am writing to you on behalf of my family to plead to you to help keep Connecticut's water clean.

1. Connecticut needs a regional water planning strategy that:
2. Prioritizes the needs of the public's drinking water supply and the health of our environment: Maintaining clean and abundant water supplies must take precedence over private interests seeking to exploit our water resources.
3. Provides transparency and allows ample opportunities for meaningful public participation: The public must be able to weigh in often during the plan's development and implementation.
4. Requires water conservation measures for water utilities and industrial users as a core value: Ensuring large users are not wasting water is critical to protecting our water supply.

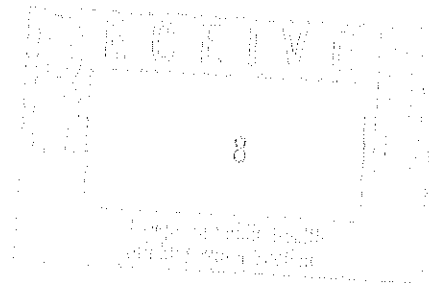

We appreciate you taking the time to let our voices be heard.

On behalf of myself and my family,

Nicole Papadopoulos

Dear Mr. Radka;

I am writing at the request of the citizens' campaign since they have made me aware that a water bottling company called Niagara has started business in Connecticut, and that the state of Connecticut is in the process of developing a comprehensive water management plan. The citizens' campaign is interested in prioritizing certain requirements for such a plan, and I think they are right to want this, which is why I am writing this letter.

It is necessary that Connecticut places a priority on requiring water conservation measures for water utilities and large private users in the water management plan as well as ample opportunity for public comment during its development. The citizens' campaign wants these three priorities incorporated into the plan, and to me they sound like common sense, so I am in agreement with them.

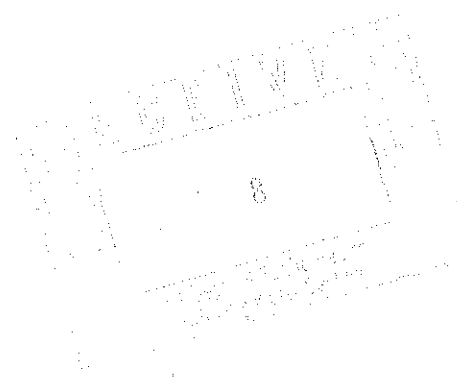

Sincerely,

Mark Schwartz

I am writing to request
 your attention regarding
 C.T.S clean water resources.
 Clean water and providing
 environmental protection
 for our water is vital.
 I hope water conservation
 is also addressed,
 especially by larger private
 users and water utilities.
 Thank you for addressing
 this matter.

Dear David Radka,

I believe CT's clean water resources are important and should remain in public trust for prioritizing the public's need for clean drinking water supplies over corporate interests, especially during times of drought.

CT needs a regional water
planning strategy that:

- ① Prioritizes environmental
protection for our water
while allowing for sustainable
economic development
- ② Requires water conservation
measures for water utilities
and large private users.

Sincerely,
The Pfeiffer Family
Orange, CT

Dear David Radka:
CT needs a regional water
Planning strategy that:
Prioritizes public clean drinking
water supplies over corp. interest
especially in times of drought!

Also Prioritizes environmental
protection for our water while
allowing for sustainable eco-
nomic development!

We, the undersigned, object to the State of Connecticut allowing large private water users to use unlimited amounts of our water resources. Citizens of Connecticut are asked to conserve 15% of usage due to our drought. Our weather climate has drastically changed and we need to think of the future and a healthy environment for all Connecticut citizens, wildlife & aquatic life and all that enjoy our recreational use of our waters.

David Radka,

It is very important we have clean water as we all cook with it, drink it, wash our clothes and shower with it.

Think about how it would be if we couldn't do any of those things. How would you live.

We need a forum where we can all come together and work together as a team to ensure we have the right plan in place for all of us and our kids and their kids

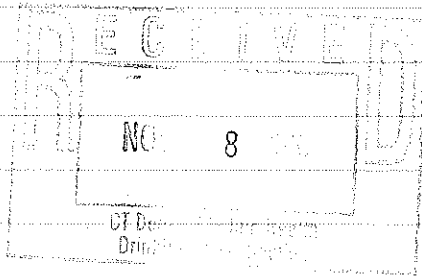

Thank You
Sue Baeder

Dear Mr. David Radka,

As a contributing member of the community in Orange, I request that you implement water conservation strategies that regulate usage of our water supply by water utilities and large private users. We request a water planning strategy that prioritizes our need for clean drinking water. Water quality and conservation are prime concerns. We as a family appreciate you reading this request.

Thanks for your time,
Deborah Izard

Connecticut clean water resources are important and should remain in the public trust, it is important because it prioritizes the public's need for clean drinking water supplies over corporate interests, especially during times of drought. It prioritizes environmental protection for sustainable economic development. Clean water provides ample opportunities for public comment during the plans development and implementation and requires water conservation measures for water utilities and large private users.

Dear David Radka,

We feel Connecticut needs a regional water planning strategy that:

- Prioritizes the public's need for clean ~~ing~~ drinking water supplies over corporate interests, especially during times of drought;
- Prioritizes environmental protection for our water while allowing for sustainable economic development;
- provides ample opportunities for public comment during the plan's development and implementation; and
- Requires water conservation measures for water utilities and large private users.

Sincerely,

Frank and Eva Schuitz

Dear Mr. Radka,
as a CT resident, I have concerns over
our clean water resources.

CT needs a regional water planning
strategy that:

- prioritizes the public's need for clean drinking water supplies over corporate interests, especially during times of drought;
- prioritizes environmental protection of our water while allowing for sustainable economic development;
- provides ample opportunity for public comment during the plan's development and implementation; and
- requires water conservation measures for water utilities and large private users.

Sincerely,
Tara Ruccì

To David Radka

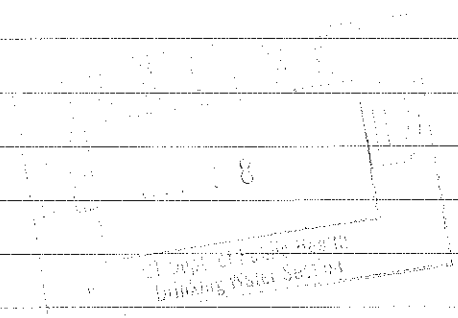

CT's clean water resources should remain in the public trust.

CT needs a regional water strategy that provides ample opportunities for public's opinion + comments during the plans development.

Sincerely,

Ron Stevens

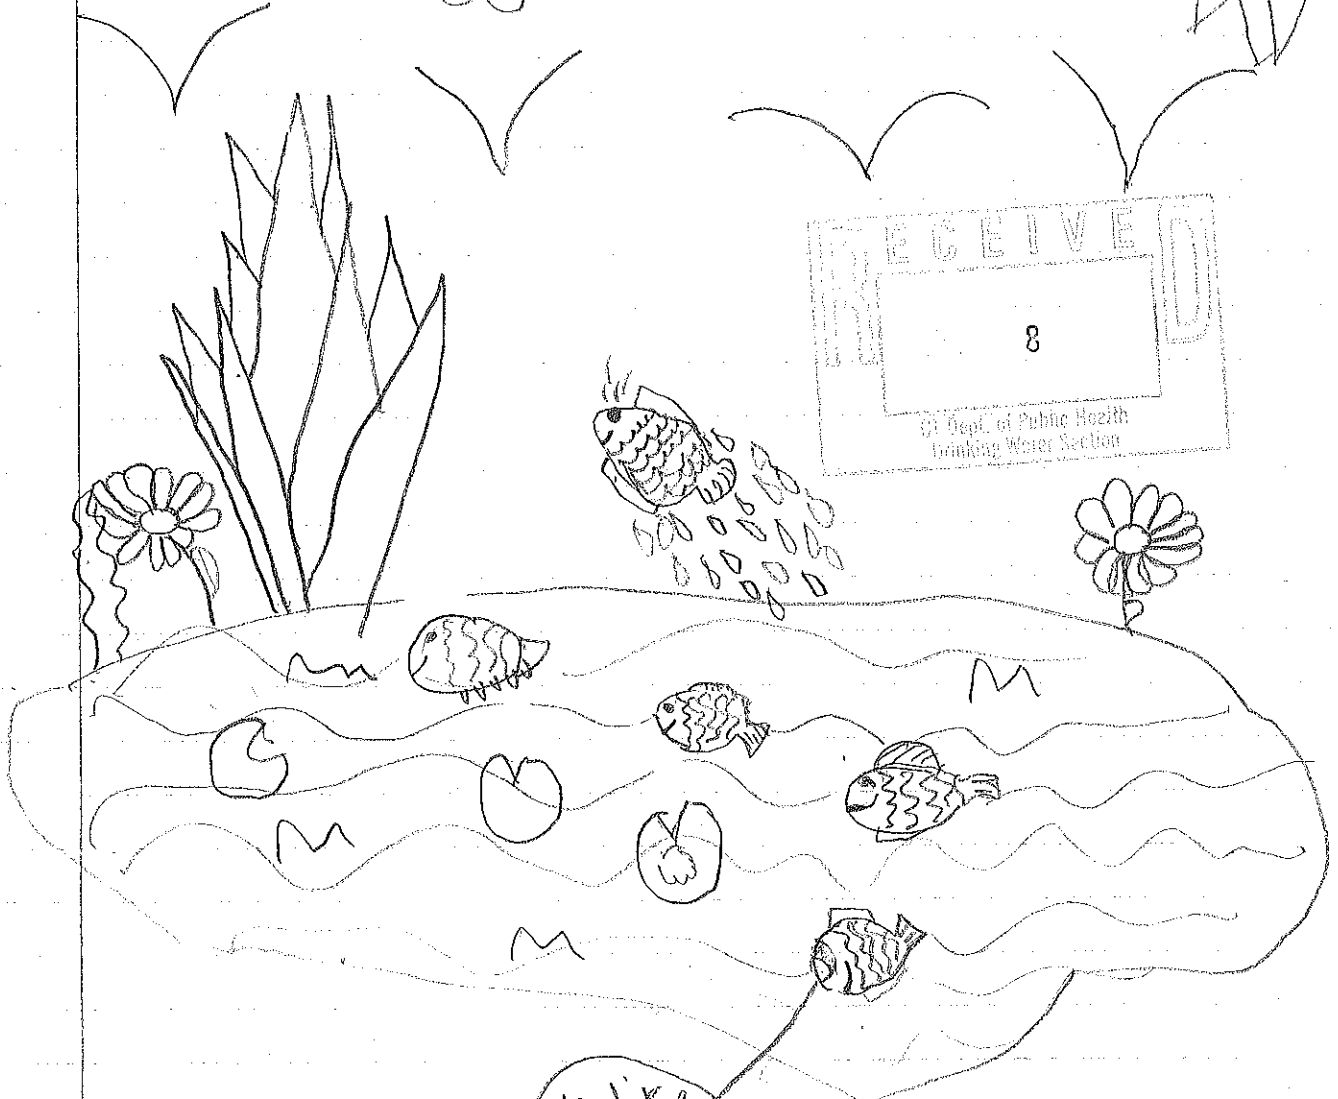

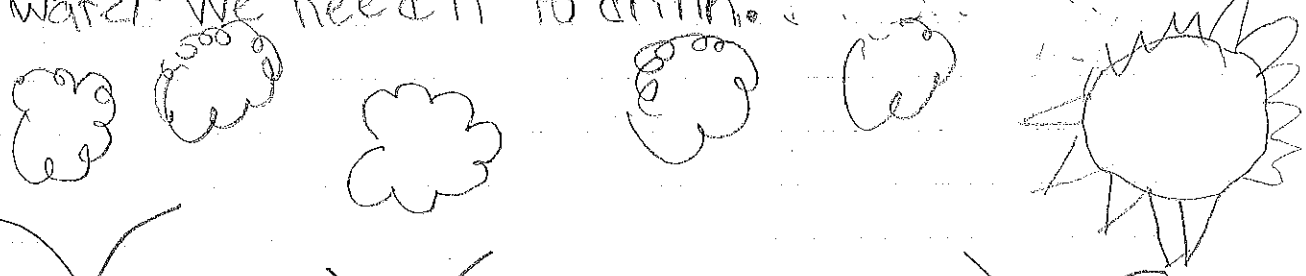

Peterson Cir - Orange, CT

Thank you

We need Clean Water

please help Connecticut have clean water we need it to drink.

we like clean water to swim in

Dear Mr. Radka,

- CT needs a regional water planning strategy that:
- ✓ Prioritizes the public's needs for clean drinking water supplies over corporate interests, especially during times of drought;
 - ✓ Prioritizes environmental protection for our water while allowing for sustainable economic development;
 - ✓ Provides ample opportunities for public comment during the plan's development and implementation; and
 - ✓ Requires water conservation measures for water utilities and large private users.
