

Hemostatic Agents

Gauze incorporating substances designed to promote rapid blood coagulation.

Hemostatic agents can establish hemostasis by means of different mechanisms:

- concentrating coagulation factors
- adhesion to the tissues

**Slide 18 – Changed “Chemical impregnated gauze incorporating chemicals designed to promote rapid blood coagulation” to “Gauze incorporating substances designed to promote rapid blood coagulation”. Removed reference to a non-peer reviewed study from Iran and to “procoagulant supplementors” from the slide and from the notes.

Celox Products

Various forms

- Celox Rapid
- Celox Gauze
- Celox Granules

**Slide 19 – Removed “(30-45sec)” from Celox Rapid listing. Replaced “Celox Trauma Gauze” with “Celox Gauze”. Replaced “Celox Powder” with “Celox Granules”. Updated images to reflect current packaging of referenced products.

QuikClot Gauze

Standard surgical gauze
impregnated with Kaolin

- Promotes coagulation through
coagulation cascade and platelet
adhesion.

**Slide 20 – Added "...and platelet adhesion." Updated images to reflect current packaging.
