RE: Electronic Visit Verification Third Party Interface Support

To ensure the success of the Electronic Visit Verification (EVV) implementation for providers, DSS has made a decision to support the development of all third party scheduling interfaces for providers required to implement EVV. As a result, DSS has agreed to pay the costs of the initial interface specifications with each of the designated third party interfaces. Each provider will still need to arrange for the programming specific to their third party application with their vendor and there may be resulting costs. However, all the effort in testing and QA for each third party vendor is being covered by DSS.

If you would like to initiate the process of working with Sandata to ensure your third party scheduling system can communicate with Santrax® Agency Management, you must send an email to ctcustomercare@sandata.com with the specific subject line "CT Interface Registration" by June 30, 2016.

Please include the following in the email:

- The agency name
- Contact person
- Phone number
- Email address

This will enroll you in the process and a Sandata representative will contact you to discuss the next steps.

The following interface specifications are also available by clicking on the following links:
